The compact
quick-strut system

small
strong
efficient!

1

push in...

2

tighten...

...that's it!

Pressix CC 27

Intelligent installation!

This is how the fastest and most efficient fixing system for channel assemblies works:

◆ The channel nut pivots and locks automatically into the profile

◆ The part is immediately retained and cannot fall out

◆ Its position can then easily be adjusted

◆ Tighten the nut – that's it!

The fast and secure Pressix CC 27 assembly system is most suitable for efficient installation of small and medium size loads. Pre-assembled parts and the innovative design reduce conventional assembly costs by up to 50%!
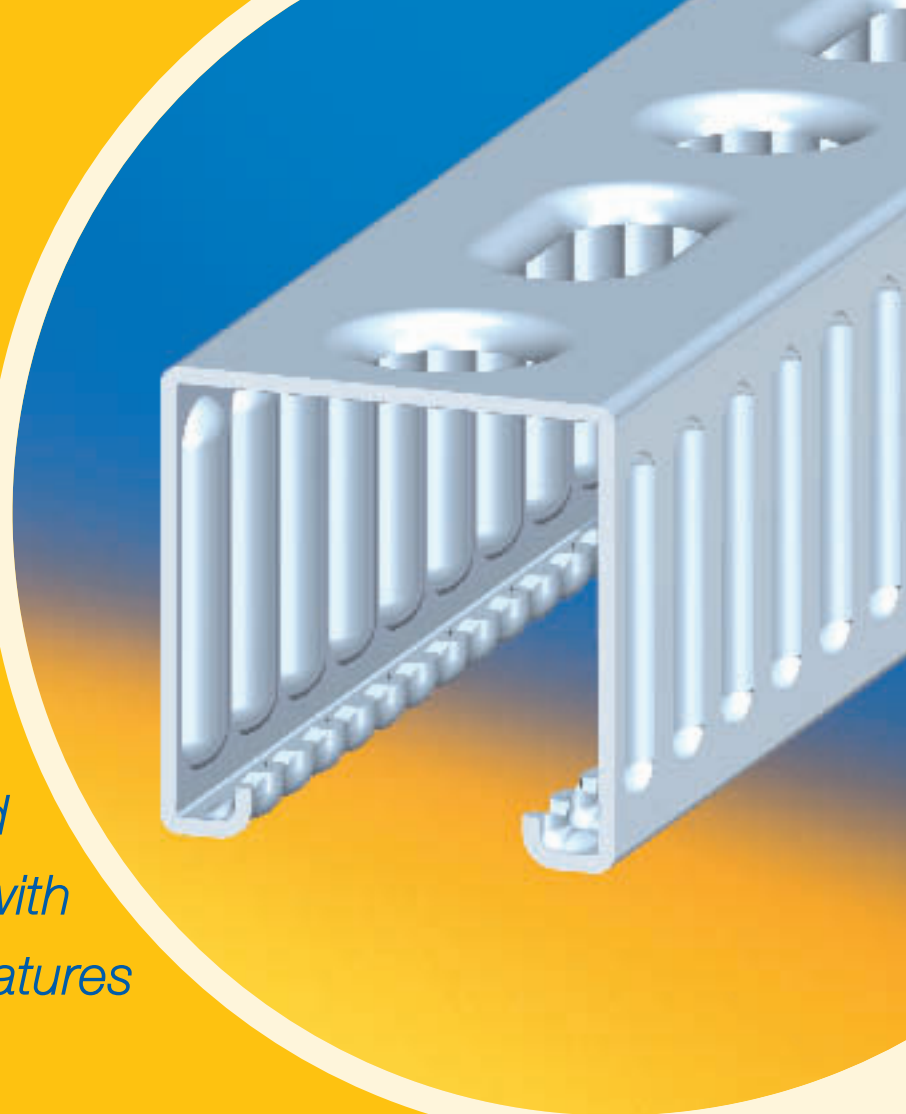

Safety is another important aspect not overlooked: the unique shape of the channel, as well as the form-fit locking by means of the channel nut, allow higher loads and additional security.

Whether for simple pipe fixing or for complex structures – Pressix makes the assembly fast, simple and secure to install!
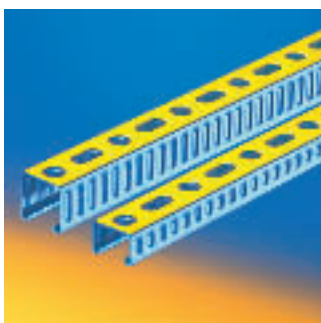

Quality
in detail

Only new, innovative manufacturing technology makes the unique 3-dimensional structure of the Pressix 27 channel possible. Moulded 3D-corrugated edges and sides guarantee a high degree of stability and torsional stiffness.

The efficient, fast and secure assembly system with built-in safety features
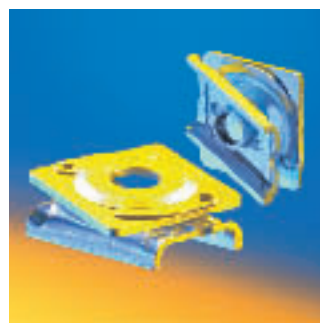

The compact product range for your application!

Channel 27/27, 27/15

Blockset CC 27

Block 27

Channel nut CC 27

Cantilever bracket 27
